PYTHON PROGRAM FOR TEMPERATURE AND HUMIDITY

CODE:

```
a=int(input("temperature:"))
b=int(input("humidity:"))
def environment(x,y):
    if(x>=80):
        print("temperature is high")
        print("temperature=",x)
    elif(y>=60):
        print("humidity is high")
        print("humidity=",y)
    elif(x<=40)&(y<=30):
        print("temperature and humidity is low")
        print("temperature=",x,"humidity=",y)
    else:
        print("good environment condition")
        print("temperature=",x)
```

```
print("humidity=",y)

environment(a,b)
```

OUTPUT

The screenshot shows the IDLE Shell 3.10.7 interface. The menu bar includes File, Edit, Shell, Debug, Options, Window, and Help. The shell window displays the output of a Python script. The first execution shows temperature:50, humidity:60, humidity is high, and humidity= 60. The second execution shows temperature:20, humidity:10, temperature and humidity is low, and temperature= 20 humidity= 10. The third execution shows temperature:100, humidity:50, temperature is high, and temperature= 100. The prompt >>> is visible at the end of the third execution.
